DATA ANALYTICS

Charting the Course of Innovation: A Startup Analysis

Introduction:

The term startup refers to a company in the first stages of operations. Startups are founded by one or more entrepreneurs who want to develop a product or service for which they believe there is demand.

Conclusion:

This project has enabled us to download a dataset for the startups and extract and refine the data using tableau and SQl workbench. The data has been analyzed using this software tableau and various components of startups ae examined. A favorable environment to create a startup to obtain significant rewards in future is achieved
